

# Typescript opgave med brug af klasser og metoder og interface

**Formål: at bruge klasser til at strukturere dine data. At forstå hvorledes man ved at bruge klasser kan indkapsle data og udstille metoder som beriger de rådata, som allerede er i klassen.**

Opgaven: Denne opgave handler om at vi skal kigge på ordrelinier fra en kundeordre. Da vores backend webservice desværre kun kan give os rå data, bliver vi nødt til i frontenden at programmerer de metoder som vi skal bruge når vi ønsker at vise vores fx beregning af moms, total sum mm.

Vores webservicen returnerer data på følgende form:

- SalesOrderID, OrderQty, ProductId, UnitPrice, UnitPriceDiscount

Til løsning af denne opgave skal du bruge vores webpack template.

## Interface IOrderLinie

### Opgave1: IOrderLinie

Opret et interface IOrderLine, som definerer en ordrelinie. Interfacet skal være i sin egen ts fil som hedder interface.ts. obs: husk export. Interfacet skal indeholder følgende:

- OrderQty, ProductId, UnitPrice, UnitPriceDiscount

## Klassen OrderLinie

### Opgave 2: klassen OrderLinie

Opret nu en TypeScript klasse OrderLinie, tilføj properties og konstruktor.

Klassen skal være i sin egen fil kaldet ordrelinie.ts, husk export.

### Opgave 3: metode BeregnSum

Opret nu en public metode på klassen OrderLinie som hedder BeregnSum, som returnerer et number. Beregningen ser således ud:  $\text{OrderQty} * (\text{UnitPrice} - \text{UnitPriceDiscount})$

### Opgave 4: metoden Moms

Opret nu en public metode som udregner momsen for den pågældende linie og returnerer resultatet.

Beregningen er:  $\text{BeregnSum} * 0.25$

### Opgave 5: metoden inkl moms

Opret nu en public metode som udregner summen + moms og returnerer resultatet.

Beregningsen er: BeregnSum() + Moms()

### Opgave 6: test din OrdreLinie klasse

Test at din klasse og metoder virker efter hensigten. I din index.ts fil skal du instantierer et nyt objekt med noget testdata. Udskriv alle properties og resultat af metodekaldene i html.

### Klassen Ordre

I klassen ordre skal alle de ordrelinier der hører til en bestemt ordre gemmes, derudover skal der implementeres metoder som giver total summer.

### Opgave 7: Klassen ordre

Opret nu en klasse Ordre som skal ligge i sin egen fil ordre.ts . Opret en property "OrderListe" som er et array af OrdreLinier. Opret en konstruktor som tager to parametre: et ordredid og et array af OrdreLinier.

### Opgave 8: metoden totalSum()

Opret en metode TotalSum(), som returnerer summen inkl. Moms af alle ordrelinierne i ordren.

### Opgave 9: test din ordre klasse

Opret noget testdata i index.ts så du får testet at din ordre klasse virker som forventet

### Opgave 10: HTML

Du skal nu vise de data som ordre objektet indeholder. Vælg selv hvorledes du vil præsentere data i HTML.

### EKSTRA: Opgave 11: Database til Ordre webservice

Se nedenfor for DDL og DML til hhv. oprettelse af ordrelinie tabel samt data til denne. Opret tabel og indsæt data i din database på Azure.

### EKSTRA: Opgave 12: Opret webservice

Opret nu en Rest webservice som bruger databasen fra opgave 11. I din webservice skal du kun have en Get som returnerer alle linier for en specifik ordre

### EKSTRA: Opgave 13: Function HentData();

Opret en function HentData() som har via et webservicekald med et id henter ordrelinier fra webservicen. Opret for hver ordrelinie et nyt ordrelinie objekt og gem alle ordrelinierne i "Ordre" objekt

### EKSTRA: Opgave 14 Klasse PrintHTML

Overvej en hjælpeklasse med hjælpemetoder til at danne den html som vi ønsker at vise i opgave 10. Implementer denne klasse.

## Database scripts til ekstra opgaver

### DDL

```
CREATE TABLE [SalesLT].[SalesOrderDetail] (  
    [SalesOrderID] INT NOT NULL,  
    [SalesOrderDetailID] INT IDENTITY (1, 1) NOT NULL,  
    [OrderQty] SMALLINT NOT NULL,  
    [ProductID] INT NOT NULL,  
    [UnitPrice] MONEY NOT NULL,  
    [UnitPriceDiscount] MONEY NOT NULL,  
    [LineTotal] AS (isnull(([UnitPrice]*((1.0)-  
[UnitPriceDiscount]))*[OrderQty],(0.0))),  
    [rowguid] UNIQUEIDENTIFIER NOT NULL,  
    [ModifiedDate] DATETIME NOT NULL  
);
```

### DML

```
